RE VISION ARY

We exist so you have the freedom to prevail

You put your life on the line in the most extreme situations. There are no half-measures. We exist so you have the freedom to prevail. We design, develop, and deliver innovative protective products for military and tactical forces on the front lines around the world. Our focus is unyielding: Your survivability is paramount.

Armor, helmets, eyewear, power management, integrated systems: Our capabilities are accelerating. Our products are high-impact, and so is our passion. We dissect in-the-field user experience from every angle. Viewing forces holistically, as precision-crafted instruments, we never lose sight of the beating heart beneath the equipment.

WE ARE

Driven by a powerful mission: deliver innovative products and platforms that save lives.

GLOBAL

We are solutions architects; our equipment and gear can be found all over the world. Tailored for any mission, domestic or abroad, military and tactical

forces stake their lives on the strength of Revision gear in the most extreme situations. **Innovation is embedded in everything emblazoned with the Revision name.**

We own the process. From cradle to grave, we own the entire product lifecycle. We continuously invest to be ahead of the cutting edge.

PARTNERSHIPS

At Revision, we are intent on accelerating our pace of innovation. Fostering fertile partnerships and collaborations with like-minded businesses and institutions is the surest way to accomplish

this mission. Through forward-thinking experimentation, the collision of ideas and perspectives, and the synthesis of diverse expertise, Revision is ready to join forces to enrich soldier systems and power industry advancements.

Our knowledge, resources, and capabilities are far-reaching, expanding rapidly and constantly evolving.

EVERYTHING WE DEVELOP LIVES AND DIES BY AN ABSOLUTE PRINCIPLE: ENHANCE EFFECTIVENESS THROUGH SUPERIOR PROTECTION AND INNOVATION.

HEAD SYSTEMS

Lightweight, fully-integrated head protection, customizable for you

"We have the capability to build a protective head systems solution for almost every threat and requirement. We pride ourselves on creating innovative, integrated, and functional head systems for all of our military and tactical customers around the globe."

ERIC HOUNCHELL
VICE PRESIDENT, ARMOR, REVISION

HEAD SYSTEMS

Fueled by a singular objective: enhance survivability

The weaponry that forces face today is of a different stripe: It's up close and personal; it emphasizes blast force, blunt impact, and, above all, lethality. Revision's head systems are built for the complexity of modern-day operations. The innovations that drive Revision helmets and head protection systems are fueled by a singular objective: enhance survivability.

Revision's engineers continuously push the limits to stay ahead of the curve, innovating in manufacturing and material applications. Revision's advanced helmet manufacturing continues to evolve in line with industry demand: state-of-the-art presses capable of both polyethylene and aramid helmet manufacturing, added

chilling capacity, heavy-duty precision cutting machinery, superior custom molds, and, custom-developed composite manufacturing equipment with flexible tooling to meet any given order portfolio.

The results are self-evident: excellent high-velocity fragmentation protection with lower weight; superior resistance to penetration, compression, and impact; and consistent ballistic performance in extreme conditions. Whether soldiers and tactical users are operating in the Arctic or at the equator, the performance and protection will be exceptional.

Visit www.revisionmilitary.com for more information.

ADAPTABLE HEAD SYSTEMS

ROBUST CAPABILITIES. Every gram of weight shed and every protection level achieved is backed by significant development, design, and manufacturing resolve. Across programs around the world—from the new U.S. Army Next Generation Helmet System, to tailored systems developed for the UK Virtus programme, to custom solutions generated for the next-generation UAE Armed Forces helmets, to hybridized Special Forces equipment—Revision’s powerful production engine has been on full display. While most companies only oversee a piece of the head system puzzle, Revision controls the whole of the product life-cycle, delivering singular, adaptable solutions for any mission from the ground up.

POWER

Ever-evolving solo, shared, and vehicular power management solutions

There are no outlets in the field. The modern soldier is a totally wired mobile network. The numerous devices carried by modern forces need a lightweight, reliable, and powerful energy source and management system. Storing, delivering, harvesting, and sharing power must happen quickly and efficiently and with longevity. Modern operations depend on more charged equipment than ever before; this will only increase in the years to come.

With great power comes superior in-the-field effectiveness. Energy efficiency and mobility is essential now more than ever, and must be rugged enough to operate at full

capacity even in extreme conditions. Revision's advanced lithium-ion rechargeable energy management systems are leading the battlefield technology revolution. With solo, shared, and vehicular power management solutions that continue to evolve, Revision is once again leading the charge.

POWER

LITHIUM-ION SAFETY THROUGH CUTTING-EDGE MANUFACTURING.

As Revision's Power & Electronics operations accelerate, forming strong partnerships to support our great ambitions is ever-more essential. Working closely with neighboring manufacturing and mechanical assembly partners, Revision has been able to produce large vehicular power platforms, and, crucially, to elevate the safety of its lithium-ion products. Investment in mechanical assembly, sealed batteries, and segregated manufacturing allows for optimized cost efficiency, enhanced product yield, improved responsiveness to customer demand, and an ever expanding slate of cutting-edge power products for any mission.

POWERING PROTECTION

Stealthy. Sustainable. Survivable.

The armored fighting vehicles designed today are packed full of sensors, communication systems, and power-hungry equipment; they are more akin to a ground-based fast jet than the steel boxes of the last decade. Since on-board lead-acid batteries are inadequate for supporting power-demanding devices on their own, operators are often forced to idle the main engine of the vehicle to generate the necessary power. The result: the stealth of the vehicle is compromised on a battlefield filled with thermal and acoustic sensors.

Revision has developed a modular and scalable energy solution capable of powering the most demanding vehicle platforms. Maintenance free and fully integrated—physically and electrically—with the host platform, the Silent Watch Battery Pack can deliver 200 amps for 8 hours in the harshest environmental conditions, ensuring that thermal and acoustic signatures are managed. The modular design of the Silent Watch conforms quickly to a range of platforms and operational uses, making this a cutting-edge and cost effective solution for the frontline of the future.

EYEWEAR

*Superior ballistics, flawless optics,
rugged durability*

"It's funny how one little piece of
plastic can keep you in the fight for
another month or the rest of your life..."

CPL. J.B., 5TH MARINES
1ST MARINE DIV, 1 MEF

GOGGLES, SPECTACLES, INTERCHANGEABLE LENSES,
AND CUSTOMIZED CUTS: WE HAVE THE OPTIMAL
SOLUTION FOR ANY SCENARIO

EYEWEAR

Ballistic protection meets flawless optics meets rugged durability

Clear vision is vital to accomplish the mission at hand. Your eyes survey the field, collecting massive amounts of information for real-time, split-second decision-making. Your eyes are 0.27% of your total body surface; yet, eye and face injuries account for a significant number of battlefield casualties. Revision's history began with a mission to protect soldiers' eyes. Since this genesis, Revision has delivered millions of kits of eyewear to forces all over the world.

Close-quarters combat, laser weaponry, and improvised explosive devices are prevalent now more than ever; Revision's versatile goggles and spectacles are built for this reality. Revision's 53,000 square foot operational and eyewear manufacturing hub houses the most technically advanced lens manufacturing equipment in North America.

The operation features an environmentally-controlled Clean Room with injection-molding machines capable of high-volume and small-batch lens production; fully-automated lens coating machines that clean, coat, and cure lenses; a quality control lab; product assembly; warehousing; and distribution operations.

For every mission, every user, every environment, Revision has a solution to match. With Revision's interchangeable, situation adaptable spectacles and goggles, there's no prism, no distortion, and there are no optical illusions — what you see is where you see it.

In recent years, Revision's horizons have broadened as we've forged partnerships with like-minded and leading companies — including ANON for the SnowHawk Cold Weather Goggle System and CCM for a suite of protective hockey visors. Still, Revision's LazrBloc laser protective lens innovations are the purest representation of our forward-thinking perspective.

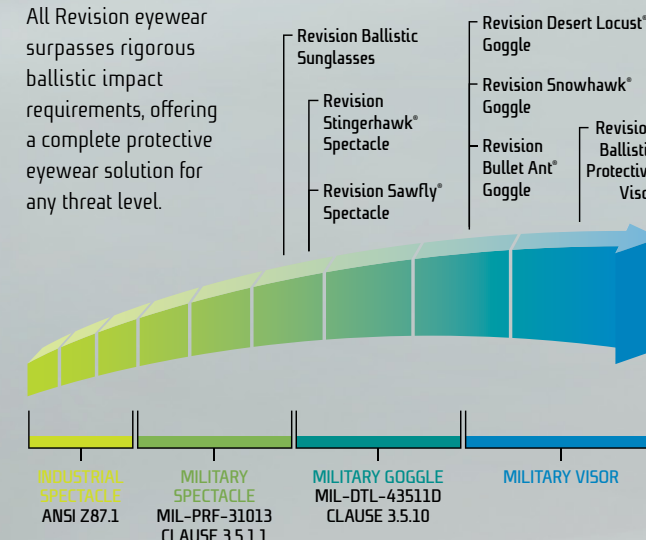

Across the whole of the visible spectrum and beyond, Revision's suite of LazrBloc lenses protect tactical users, soldiers, and pilots from laser distraction, disorientation, and incapacitation during any operation where every second counts.

90% OF EYE INJURIES ARE PREVENTABLE WITH THE RIGHT EYEWEAR.

BALLISTIC THREAT LEVEL

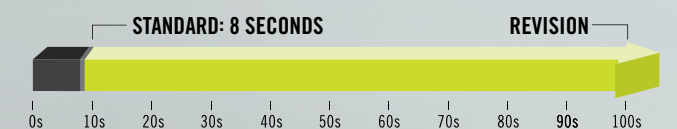

IMPACT TESTING

All Revision eyewear surpasses rigorous ballistic impact requirements, offering a complete protective eyewear solution for any threat level.

ANTI-FOG TECHNOLOGY

OcuMax Plus is Revision's proprietary next-generation anti-fog lens coating designed to maintain clarity in extreme conditions. Revision's OcuMax Plus sets the benchmark for next-generation anti-fog coatings. OcuMax Plus provides an optimal combination of anti-scratch coatings on the outside of the lens and anti-fog coatings on the inside.

ANTI-FOG TEST: EN166, CLAUSE 7.3.2

Eyewear must remain fog free for a minimum of 8 seconds at 50°C

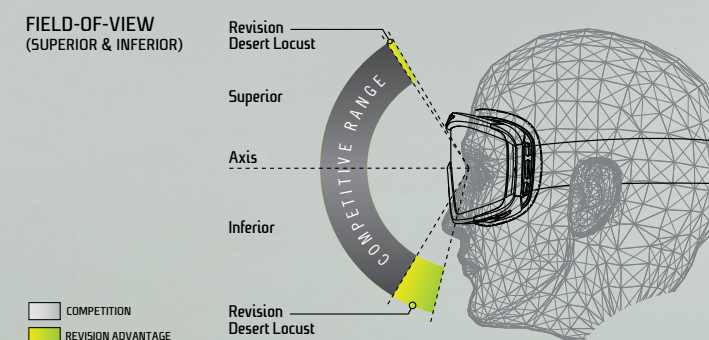

EN 166: Revision's OcuMax Plus coating drastically exceeds the 8-second industry standard for anti-fog protection (EN 166, Clause 7.3.2), remaining fog free for over 100 seconds when exposed to a constant heat of 50°C.

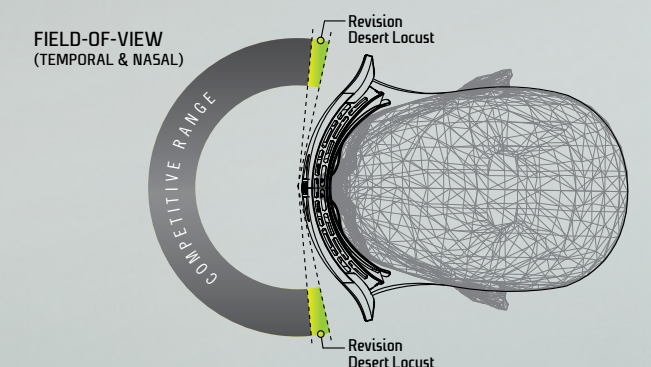

REVISION EYEWEAR IS DESIGNED, TESTED, AND MANUFACTURED TO THE HIGHEST STANDARDS, EXCEEDING BALLISTIC IMPACT REQUIREMENTS FOR SPECTACLES AND GOGGLES.
